Voice Mail System Voice PRO

What is Voice PRO?

IN THIS COMPETITIVE business environment how you communicate with customers, staff and vendors has a huge impact on what a business can accomplish. With an increase in the number of business transactions over the phone, Voice Mail has become a very important tool for all businesses.

Voice PRO is a complete front and back end corporate Voice Mail System. Most companies today are looking for professional phone call handling at their office. **Voice PRO** handles calls professionally and easily, which enhances the image of your company and improves productivity. It allows the callers easy access to departments and extensions and has a built-in voice messaging system which facilitates callers to leave messages for your staff when they are busy on the phone or not available.

Voice PRO is a PC-based Voice Mail System utilizing non-proprietary, open standards based hardware platform and works on either Windows 98, Windows NT or Windows 2000 Operating System.

Voice PRO has a highly modular structure, which can grow along with your business. Starting with 2 Ports it can grow up to 48 Ports and is field up-gradable. Voice PRO easily integrates with most modern phone systems (PBX/EPABX).
